WHAT'S OUR VISION

To be the number one company in power and safety solutions, representing **AEG**, **EDITELEKTRONIK**, **BELDEN**, **JRC**, **ORTEA**, **ENERSYS**, **BASOR**, **STINGER**, the best global brands around the world. Innovate, integrate and comprehensively implement technology solutions throughout the life cycle of client's business.

We are a global service providers for **AEG**, **EDITELEKTRONIK**, **BELDEN**, **JRC**, **ORTEA**, **ENERSYS**, **BASOR**, **STINGER**.

With roots in innovative technology, spanning over decades, our partner network branches provide easy solutions for our clientele. Our services ensure efficiency in power availability, system up time for enterprise-wide networks, mission critical telecommunications systems and industrial manufacturing processes.

A LITTLE
ABOUT **US**

WHAT WE DO

We offers comprehensive product solutions including: UPS Systems, AC/DC inverters, rectifiers, power management software, acute harmonic conditioners and surge suppressors based with **AEG**, **EDITELEKTRONIK**, **BELDEN**, **JRC**, **ORTEA**, **ENERSYS**, **BASOR**, **STINGER** and end-to-end infrastructure solutions.

We ensures that users of **AEG**, **EDITELEKTRONIK**, **BELDEN**, **JRC**, **ORTEA**, **ENERSYS**, **BASOR**, **STINGER** technologies benefit from lifetime support by taking advantage of Total Quality Management and Power Services Programs. As we take a comprehensive approach to your needs, We aim to ensure you maintain safe, efficient and environment friendly standards that meet or exceed international expectations.

AEG, **EDITELEKTRONIK**, **BELDEN**, **JRC**, **ORTEA**, **ENERSYS**, **BASOR**, **STINGER** extension of (Around the World) network partners are spread across 100 countries providing us with both economies of scale and a range of quality innovative products. Our stability to tap into this vast global network allows us to rapidly provide solutions to our clients' urgent problems as well as assist them in expanding their infrastructure without any hitches.

Telecommunication sector has taken advantage of our exclusive distribution rights for DC/AC composite solutions by using these in over 4000 installations.

[TRANSFORMING
INDUSTRIAL
STANDARDS]

WHAT WE OFFER

- UPS requirements
- Rectifiers and Inverters
- Sealed Laid Acid and Gel Maintenance
- Free Batteries
- Stabilizers
- Transformers
- Power Factor Correction Systems
- 132 KV Grid Stations, Installation and Handling
- Turnkey Electrical and Mechanical Projects
- SS Cable Mesh and Hot Dip Galvanized Ladder
- Fire Detection and Suppression System
- CCTV and Security Surveillance Systems
- Electric Security Fence
- Industrial Cleaning Equipment
- District Cooling Contracting
- Sanitary Installation and Pipes Repairing
- Generator Rental Service

AEG INFORM PERFECT & FUNCTION

3-PHASE UPS SYSTEMS

For Industrial & IT Applications

For over decades, AEG Power Solutions has successfully designed and manufactured uninterruptible power supply (UPS) systems, with over 70 technology patents registered in energy conversion. The expertise built over years in providing premium quality solutions to secure highly reliable power even in the harshest environment positions uniquely our 3-phase UPS range.

PROTECT 8 S14 Industrial UPS with galvanic isolation at output line

10 - 60 kVA

UPS systems from AEG Power Solutions ensure the continuous availability of all global industrial requirements in oil & gas, petrochemical, power generation, transportation and other heavy industries. The state-of-the-art, double-conversion topology and design of the Protect 8 is flexible, meets practically all conceivable customer requirements and is suitable for use in harsh environments.

PROTECT 4 33

Multi purpose high power UPS

The Protect 4 is a highly reliable solution with a very long track record in system availability and use, providing safe and uninterrupted power back-up. It is a compact ready to install unit, with a maximum single unit capacity of up to 600 kVA, ensuring the safe operation of your critical loads. Protect 4 is designed to meet the toughest application requirements and offers high reliability with efficient 12 pulse rectifier technology for sinusoidal input current and for reduced input current harmonic distortion (THDi).

PROTECT PLUS M600

Modular 3-phase UPS up to 900 kVA

Protect Plus M600 is the modular UPS system that combines high AC/AC efficiency values with a compact footprint and a flexible and scalable architecture, able to reach up to 900 kVA.

It is designed specifically for data centers, transportation, retail and light industrial applications as well as all other critical applications where power reliability is essential and power consumption is an important variable.

AEG

PROTECT FLEX

modular industrial UPS with 10-160 kVA
Parallel capability up to 160 kVA

Protect Flex is based on a new concept of UPS systems that combines a modular architecture based on 10 and 15 kVA/kW hot-swappable power modules with a customizable set of options. The system is an industrial-grade fully modular UPS, flexible and highly cost-effective. It can cope effectively with harsh environmental conditions, with an IP43 rating protection. Protect Flex is designed to maximize savings in terms of footprint and power installed (kVA)

PROTECT Conline UPS

1 - 10 kVA
1-phase/1-phase

Protect C is a VFI / double conversion online UPS suitable for safe supply of application-critical loads in the IT environment such as workstations, servers, storage systems and sensitive switching and control systems. With the lag increased to 0.9 the demand of higher performance active loads was taken into account. The ECO and frequency inverter operation modes highlight the requirements for a modern versatile UPS. Protect C series is also available on request as a rack mount version as well as one with longer battery backup time.

UPS SYSTEMS

Single-Phase Uninterruptible Power Supplies

AEG PS' range of UPS systems contains uninterruptible power supplies in all power classes with 1-phase output power. These UPS are specifically adapted to the requirements of an IT environment. Here, an uninterruptible power supply is essential to ensure a smooth operation and sufficient data protection. With UPS systems, computers and servers are protected against insufficient power quality and shut down running processes in a controlled way during any power cuts.

PROTECT PLUS M400

1/1, 3/1 or 3/3 phase modular UPS with 10-40 kVA

Protect Plus M400 is a modular on-line (VFI-SS-111) UPS system with a high operating AC/AC efficiency and compact footprint. The UPS system is designed to protect critical data and IT infrastructures with the ultimate on-line power protection. The Protect Plus M400 is based on a 2U high 10kVA/kW power module that can be housed in one of two frame sizes (20 kVA or 40 kVA)

AEG

PROTECT B / NAS

Line-interactive UPS 500 - 1500 VA

Protect B is a UPS specially designed to provide power backup for small and medium enterprises and home businesses and is perfect for protecting ATMs, 3D printers, workstations, PCs, and other IT applications. The systematically refined hardware design with battery-saving charging electronics guarantees many years of use. The UPS front panel makes it easy to replace the batteries.

PROTECT A

Line-interactive UPS 500 / 700 / 1200 / 1600 VA

Avoid irreparable damage to your data and system that can cause significant financial loss caused by over voltage or power surges. With easy installation, the compact uninterruptible power supply, Protect A will assure device protection and provide several minutes of runtime in case of mains power failure. It is ideal for office, network and telecom peripherals.

PROTECT B PRO

Line-interactive Rack/Tower-UPS, 750 - 3000 VA

With its high power factor of 0.9, Protect B Pro is one of the most efficient power supply systems with VI protection technology. Its battery management system enables extended battery lifetime as there is a decrease of pole corrosion. Communication options including programmable potential-free contacts, emergency power off switch, RS232, USB and an extension slot that can be used in parallel mode;

PROTECT ALPHA

450 - 1200 VA

1-phase/1-phase

Protect Plus M600 is the modular UPS system that combines high AC/AC efficiency values with a compact footprint and a flexible and scalable architecture, able to reach up to 900 kVA.

It is designed specifically for data centers, transportation, retail and light industrial applications as well as all other critical applications where power reliability is essential and power consumption is an important variable.

AEG

PROTECT PV

630-880 kVA/ 3 Phases

The Protect PV solar inverter product line delivers solutions for utility-scale applications on industrial roofs and ground mount installations. Thin-film modules can be used efficiently as the Protect PV has a power stack with advanced measuring and control technology enabling input voltages of up to 1000 VDC. With an efficiency factor of 98.85% according to the European standard 50530, the Protect PV.880 well exceeds expectations for its power class.

PROTECT SC UL

Bi-Directional Energy Storage Power Converter up to 850 kVA

Protect SC is a bi-directional power converter from AEG Power Solutions with IGBT technology. The converter is the core element of any battery energy storage system as it charges and discharges batteries to store or provide power according to the application requirement (frequency control, peak shaving, energy shifting), or voltage control. Protect SC provides an outstanding conversion efficiency factor for both the charging and discharging phases.

DC UPS & RECTIFIER SYSTEMS

For decades AEG Power Solutions has designed and manufactured first choice reliable rectifiers, chargers and DC power supply systems to meet the requirements of all types of industrial applications, operating in the toughest environments. Heavy duty design, proven micro-processor-controlled thyristor technology increases the availability, building block modular design and outdoor specific options are part of the characteristics of our comprehensive DC UPS series which can run on nickel-cadmium or lead-acid batteries.

PROTECT RCS SPRE-TPRE

Thyristor-based 3- & 1-phase rectifier and charger system

The Protect RCS DC system has been developed and designed to provide high reliability power supply and battery charging capability. The Protect RCS DC system is a thyristor-controlled rectifier, suitable for charging nickel-cadmium or lead-acid batteries while supplying DC loads. It can also be used without batteries as a direct power supply.

EDITELEKTRONİK

50000 kVA to 100 KVA AUTOMATIC VOLTAGE STABILIZER PARALLEL REDUNDANT - VOR-3P50000

What is the Parallel Redundant Voltage Stabilizer?

VOR is an AC optimisation and regulation unit which supplies continuous, safe and constant voltage to the critical industrial machines and equipments. It adjusts the unstable grid voltage to the rate which is calculated according to the facility's unique conditions.

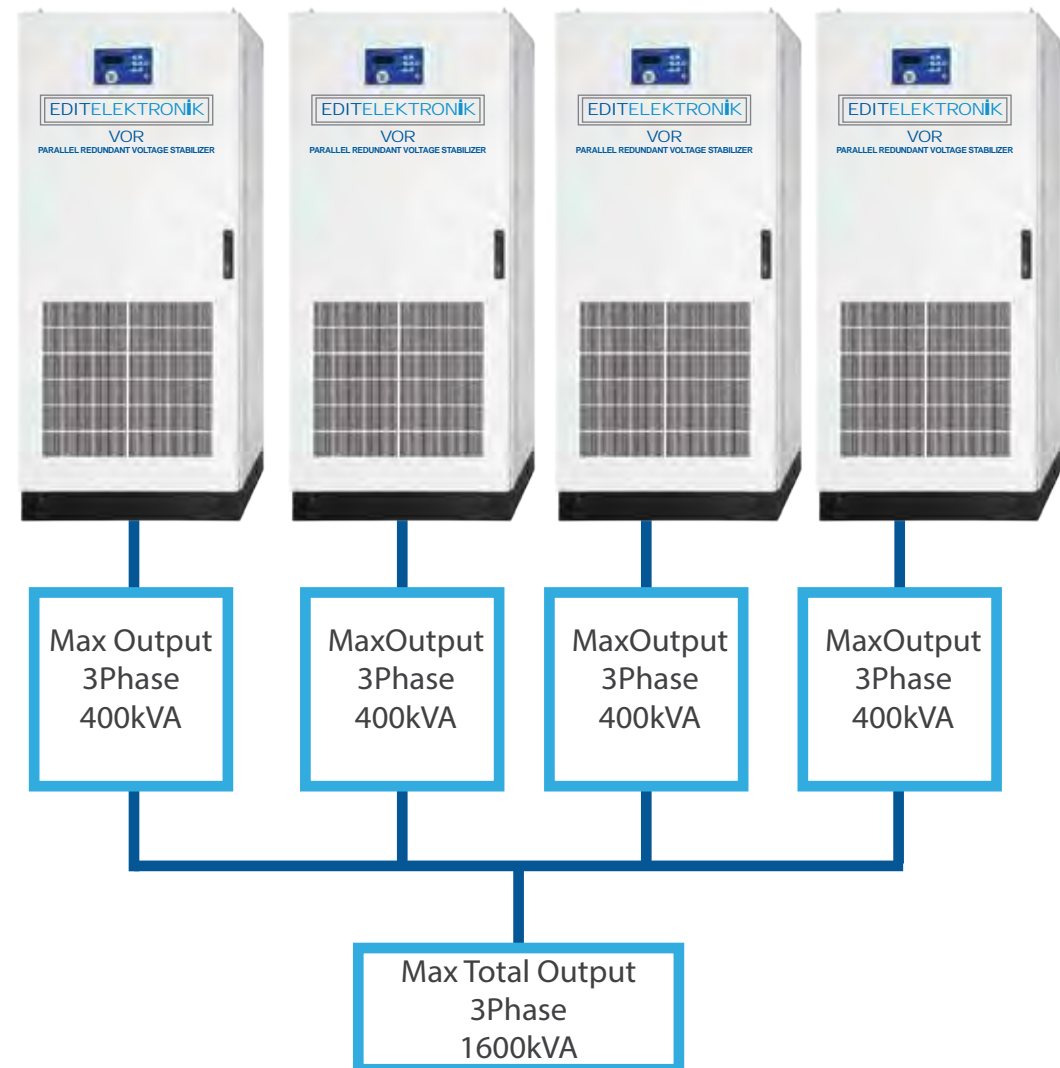

- According to adjusted low current Level; energy saver pass to standby mode when the current level goes under adjusted level.
- According to adjusted voltage range; when the energy saver's all three phase are in that range, energy saver pass to standby mode because there is no need the regulation.
- The purpose in this situation to prevent the unnecessary stabilizer energy consumption. When energy saver goes to standby mode whole device consume only 100-200 watt energy per hour. With this feature it is provided up to 1% energy saving.
- With this feature, Energy saver provides up to 1% energy saving and money according to power level of stabilizer

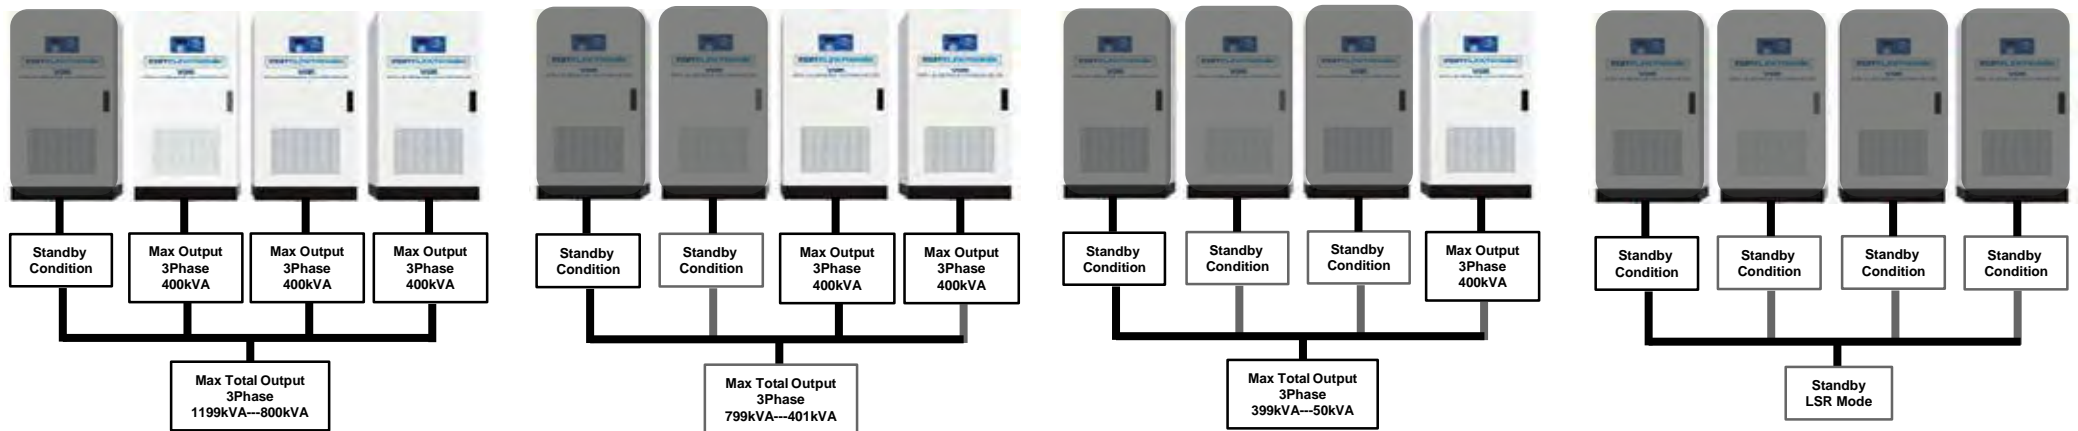

EDITELEKTRONIK

This Modular technology can be used for energy saving especially at big power levels. According to usage of power level, energy saver modules go to standby mode and save their own energy consumption. We can explain this system on an example;

- In this scenario total power need is 1600 kVA
- We will use 4 pcs 400kVA modules to meet this 1600kVA requirement.
- In this system all modules are communicate with eachothers. But the whole system manage from one point in VOR.
- LSR and other energy saving methods which we mentioned in presenation are used in VOR systems.

Different Energy Saving Ways For Different Power Usage Levels;

Situation 1 shows that when usage power goes down to lower than 1200 kVA, last module turns standby mode

Situation 2 shows that when usage power goes down to lower than 800 kVA, last two modules turn standby mode

Situation 3 shows that when usage power goes down to lower than 400 kVA, last three modules turn standby mode

Situation 4 shows that when usage power goes defined LSR current or voltage level ranges, whole VOR system turns to standby mode

With whole explained features VOR provides totally up to 20% energy saving

EDIT ELEKTRONIK patented technology VOR Parallel Redundant Voltage Stabilizers provides usage continuouty and energy saving solutions;

The Structure of device is modular system. This mean is; user can add new energy saver modules according to increase of power requirements. User don't have to buy a new and bigger stabilizer.

User can make
to VOR BIGGER.

220VAC 50A - 200A BATTERY CHARGER UNIT

- Production with single phase and three phase input supply
- Production between range of 12-450 V DC and 1 A-1000 A
- Automatic float boost facility
- High productivity through Thyristor-Diode, Transistor technology and microprocessor controlled boards
- Low waviness (ripple 1%), high current and voltage stability
- User friendly, easy and comprehensible LCD display and mimic diagram
- Audial and lightened warning for all faults and dry contact outputs
- External battery connection
- Battery discharge protection with Low Voltage Disconnect unit (LVD)
- Silicon Dropper unit for voltage regulation of DC supply
- Minimal size, static structure, easy commissioning
- Cabinet design suitable for industrial environment
- Special, durable cabinet, powder coated with standard color named RAL-7035, IP21 (IP54 Optional)
- Manuel adjusting property for output voltage and output current from LCD
- Automatic battery activation in case of power cuts (Optional)
- Possibility of regulation of charge-voltage-current through battery temperature feedback (Optional)
- Production with ISO 9001:2008 Quality Management System

5 KVA VOLTAGE STABILIZER - SERVO AUTOMATIC - ESV-1P05

Servo Voltage Stabilizer is an economical solution for operation of your electrical without any problem wherever the main supply is not trusted. Produced with high quality materials, supplies to operate under heavy duty conditions at full load with high efficiency ESV3FXX has very wide using area range and to be used for years with reliability and without any problem.

USAGE AREAS

Uninterruptible Power Supplies, TV / Radio transmitter stations, GSM base stations, image and sound production studios, air - conditioners medical devices, hospitals, neon and laser illuminations, press and textile machines, photograph press machines, submerging pumps, ships, electric motors and all electrical devices sensitive to voltage changes.

3 kVA VOLTAGE REGULATOR - IMPR-1P03

Servo Voltage Stabilizer is an economical solution for operation of your electrical without any problem wherever the main supply is not trusted. Produced with high quality materials, supplies to operate under heavy duty conditions at full load with high efficiency ESV3FXX has very wide using area range and to be used for years with reliability and without any problem.

IMPACT STATIC VOLTAGE STABILIZER

IMPACT Static Voltage Stabilizer; are the devices of voltage control, protection and management which are microprocessor controlled, and which have high speed semiconductor technology. They are adjusted to the right voltage value required by industrial devices that are fastly growing and that are becoming more sensitive; and they are designed to meet their continuous, settled and secure energy needs.

Nowadays, thousands of users who have totally different characteristics such as plants, hospitals, public buildings, houses, farms, constructions etc. use the same main grid. IMPACT Static Voltage Stabilizer optimizes the irregular electricity which different users receive from city main grid at the same time, in accordance with only your business and the electronic devices you use.

IMPACT Static Voltage Stabilizer which can be produced in a very wide input voltage interval for places where grid voltages drop or rise excessively; evaluates grid voltage decreases and increases in 0.020 seconds when the main grid voltage drops -60% or rises +%40 and corrects with 500V/sec. Speed. By this means, your expensive industrial devices are protected against dangerous voltage changes and also it enables your systems to work with high efficiency and without interruption.

IMPACT Static Voltage Stabilizer has High Voltage, Low Voltage, Over-temperature, Overload, Short Circuit and Phase Break protections for its own operating safety and also for all electronic devices in your business to work safely. There is a "Manual By-Pass" unit which enables the loads to be transferred directly to network voltage for providing usage flexibility and working safety. It is equipped with thermomagnetic fuses in its inputs and outputs.

IMPACT Static Voltage Stabilizer is designed with its compact, esthetic and modular structure, in such a way that it can be easily connected with electric systems everywhere in the world. "BUS-BAR PANEL INPUT-OUTPUT MODULE" which is required for direct connection can be added to BUS BAR systems optionally on request.

Information such as Input Voltage, Output Voltage, and Load Amount etc. can be viewed; breakdown and warning information can be followed on LCD DISPLAY which is standard in IMPACT SVS. One may reach devices over on the web, view all information on LCD DISPLAY and change set values of the device with "REMOTE VIEWING AND MANAGEMENT".

Product Configurator

NEW PRODUCTS

SPIDER III Standard Line PoE Switches

Increase performance and reduce costs – with PoE+ for greater power to more devices, without an external power supply
 Enable flexible network expansion – with configurable fiber and copper port options to meet specific industrial needs
 Protect network resiliency in harsh environments - with metal enclosure, IP30 protection rating and shock, vibration and interference resistance

REVConnect Pre-term Cat6A

Factory-terminated RJ45 plugs to REVConnect Core (switch port equipment harnesses).
 REVConnect Core to OPEN (pigtails) to be used when lengths cannot be exactly defined.
 More cost effective pre-term solution (no need to use couplers).
 1 x Cable REVConnect Pre-Term System available.

BAT450-F Industrial Wireless LAN Access Points

Customizable configurations - Wide range of configurations available, including port type and quantity, as well as country-specific industry certifications.
 Ruggedized and compact design - Meets the IP65/67 protection class and operates at an extended temperature range of -40°C to +70°C to enable mounting on masts or walls in harsh indoor and outdoor areas.
 Secure operating system - Runs on Hirschmann's HiLCOS software to ensure maximum network availability and data security across wireless connections.
 Increase efficiency and resiliency - With the option of direct 110 V DC power supply

Japan Radio Company

JRC is a leading communications technology company. JRC is making the most of its knowledge, technology and experience built up over many years in various fields of information technology, contributing to the safety and security of people around the world.

AHEAD OF TIME

Besides standard production, ORTEA is extremely flexible in developing and manufacturing special equipment according to user's specifications. Thanks to the experience gained by the Company over its many years of applied technological development. Such development today includes sophisticated computer hardware and software that enables the technical staff to draw up and examine electrical and mechanical designs for each "custom product" on a quick and cost effective basis. The belief that quality of product and customer satisfaction are the core for a modern organization, led to the implementation of an UNI EN ISO 9001:2008, ISO 14001:2004, OHSAS 18001:2007 approved Quality System.

PowerSafe SBS | EON Technology

EnerSys is the global leader in stored energy solutions for industrial applications. We manufacture and distribute reserve power and motive power batteries, battery chargers, power equipment, battery accessories and outdoor equipment enclosure solutions to customers worldwide.

All EON Technology types do retain the traditional features and benefits associated with PowerSafe SBS, in particular:

- The long design life
- The high energy density
- The extended shelf life
- The wide operating temperature range

DataSafe HX Plus

The DataSafe HX range of valve regulated lead acid batteries have been designed to offer superior solutions for the Uninterruptible Power Supply (UPS) and Information Technology markets.

- Revolutionary 16V, front terminal designs
- Specifically developed for UPS applications 550, 800 and 925 Wpc sizes
- High power density

PowerSafe V Front Terminal

Powersafe V Front Terminal has the performance and life of the Powersafe V but with front electrical connections for quicker and easier installation and maintenance.

- VRLA technology
- 31 to 165 Ah capacity range
- 12V monoblocs
- Front terminal connections for fast and easy installation and maintenance
- Fits 19", 23" and ETSI racking
- UL94 V-0 flame retardant case and lid
- High reliability

The rail | power VR

The rail | power VR is a patented technology based on mesh electrodes with a fleece separator. The electrodes use tried-and-tested lead-calcium technology. The electrolyte contains gel additives (ESS technology) and is suspended in the fleece separator. As a result, this technology not only offers the benefits of a fleece battery, but also those of a gel battery. The batteries are installed in housings made of stable polypropylene or ABS. rail | power VR batteries work reliably as on-board batteries in all railway vehicles. They are also used as starter batteries in diesel vehicles.

The FNC-VR is a valve regulated nickel-cadmium Battery

The extremely low maintenance grid FNC-VR battery is developed in line with the HOPPECKE proven fibre matrix plate technology. The addition of the special recombinant technology of this battery to the fibre plate design gives exceptional reliability in critical applications. The FNC-VR battery provides superior performance to other valve regulated nickel-cadmium technologies.

Designed specifically for UPS, switchgear and other standby applications where the system must be totally reliable with minimum maintenance.

sun | power VR M

The design principle for HOPPECKE sun | power VR M batteries is based on the use of grid plates and ESS technology. The high energy density of HOPPECKE sun | power VR M batteries results in a very low space requirement, thus enabling maximum utilisation of your premises. The properties of HOPPECKE sun | power VR M batteries make them extremely versatile. HOPPECKE sun | power VR M batteries are frequently used for street lighting, medical supply units, signal systems and leisure applications. Both the level battery lid with integrated handle and the easy-to-clean surface ensure safe and convenient handling during installation.

Siemens HiPath

The Siemens HiPath 4000 Real-Time IP System is a converged IP-PBX telephone system—a circuit/packet switched system containing PBX common control components and utilizing both an internal switch network and external IP-based switch network (that is, enterprise LAN/WAN—for provisioning reliable and real-time call control over alternate networks).

The HiPath 4000 product family features the following models, maximum capacities and redundancy offerings:

- HiPath 4300—supporting from 300 to 2,000 stations (and a maximum of 1,200 IP stations), but no common control (that is, main processor) or power redundancy options.
- HiPath 4500—supporting from 1,000 to 12,000 stations (and a maximum of 2,490 IP stations), with standard common control (that is, main processor) redundancy and optional power redundancy.
- HiPath 4900—supporting up to 30,000 stations (and a maximum of 7,470 IP stations), with standard common control (that is, main processor) redundancy and optional power redundancy.
- HiPath 4000 Networked—supporting up to 100,000 stations (and a maximum of 30,000 IP stations). This can be 100,000 IP stations depending on how many systems are networked.

Totally Integrated Automation Portal

Totally Integrated Automation Portal (TIA Portal) provides you with unrestricted access to our complete range of digitalized automation services, from digital planning and integrated engineering to transparent operation.

Software for SIMATIC Controllers

Intuitive and efficient engineering – from the microcontroller to the PC-based controller

Digitalization is noticeably changing our world – and the world of industry. The data volume in modern industrial plants is growing continuously. That brings new challenges for SCADA solutions: Enormous data volumes must be managed and archived for the long term. At the same time, production processes must be monitored and controlled as reliable, efficient, and productive as possible and they must be constantly optimized.

Spare Part Services

Whether new, repaired or refurbished – our services ensure that any spare part required will reach you within the shortest possible delay. Easy Daily Spares® guarantees fast and reliable delivery of OEM-quality spare parts by the next business day. Easy Repair means that defective parts are overhauled and refurbished to fully functional 'good-as-new' components. Here too, depending on the region, 24h delivery is possible (advance replacement).

SIMATIC SCADA Systems

Totally connected. Totally digitalized.

users over the entire life cycle of the machine or plant – from the planning and design. With SIMATIC, users rely on an integrated engineering environment.

SIMATIC SCADA Systems

BASORFIL
WIRE MESH CABLE TRAY

BASOR ELECTRIC, S.A. has more than 30 years of experience in the sector of industrial electrical systems which make it a recognized leader in the manufacture of cable conduction systems for both big and small engineering works. **BASOR** constantly demonstrates its interest in innovation by investing in its R&D department which, together with the engineering department, studies each case individually to find the most efficient solution and offer its clients the most advanced products available in the market. **BASOR** ELECTRIC is in possession of a number of patents related with the designs of the standardized family products.

All our products are manufactured following the IEC's International Standards, except in those cases in which the International Electro technical Commission has not yet developed an international standard and, therefore, the products are manufactured following European standards. To manage projects based on non-international rules and regulations, which are different to European regulations, (NEMA, ASTM. etc.), **BASOR** draws up technical documentation showing the equivalencies between such regulations and European regulations.

Moreover, every year the company invests greatly in the renovation of its machinery, in security for its staff and in the automation of the different processes. This reduces the time needed to manufacture a product and therefore improves the service, which can be rendered to clients. All the processes concerning the manufacture of every family of products are carried out in the production centers owned by GRUPO **BASOR**, which are located in Almansa Castell6 de Rugat Gandia

BASOR is one of the few companies in the industry of electrical cable trays which has its own Superficial Treatment's' and Plant, where the products receive a final hot dip galvanized finish, a cincado finish or an organic finish. The company has a great international projection, actively exports and distributes its products to more than 20 countries from its logistic centres in Almansa, Getafe (Madrid), San Vicens dels Horts (Barcelona), Paterna (Valencia), Seville, Vigo, Lisbon (Portugal), Paris (France) and Budapest (Hungary). The commercial department shall clarify any doubts which you may have. Please don't hesitate to contact any of our offices or, should you prefer to do so, feel free to contact our head office.

The high level integration of electric fence security system delivers full configuration, control and monitoring capabilities for multi-zoned, multi-site perimeter security. Our security electric and non-electric fence systems are safe, effective and reliable perimeter security solutions. It is configurable for any type and size of business. Our security solutions are fully customizable. The electric-fence technology has been installed throughout the world to provide effective perimeter protection and site security across a broad spectrum of applications.

To ensure such a high voltage, the wires used for the energizers need to have a high conductivity. This means that the wire should have a low resistance. For this purpose, professionals at Stinger use a specially made aluminum wire which has an extremely low resistance of 30 Ohm/km, compared to 260 Ohm/km on braided steel wire. The lower the resistance, the higher is the conductivity. This results in higher energy and voltage availability on the fence.

AUTOMATION

AUTOMOTIVE INDUSTRY

We can support you from metal forming to final assembly. In the Automotive production market, technology improvement is vital to increase production and revenue, for that reason, these Technologies can optimize your operation, from system design through maintenance. We can support you from metal forming to final assembly.

Metal forming - Stamping:

- o Press control system: Tandem and Transfer Systems
- o Welding Stations

Powertrain:

- o Sub-Assembly & Test Machines
- o Material Handling/conveyors
- o Robot Integration

Body Shop/Paint Shop & Final Assembly:

- o Specific Control for Water, HVAC and Pressurized Air
- o Tracking Solutions
- o Manufacturing Execution System (MES)

PLC

AUTOMATION

ENTERTAINMENT INDUSTRY

Theme Park:

For theme parks, redundancy, instant response times and safety are essential to the engineering and design process.

- o Power Distribution
- o Motor Control
- o Monitoring
- o Redundant Controls
- o VFD's

Stage Automation:

Controlling stage machinery and components through the use of electrical power and automation.

- o Motorized equipment
- o Stage effects
- o Stage lighting

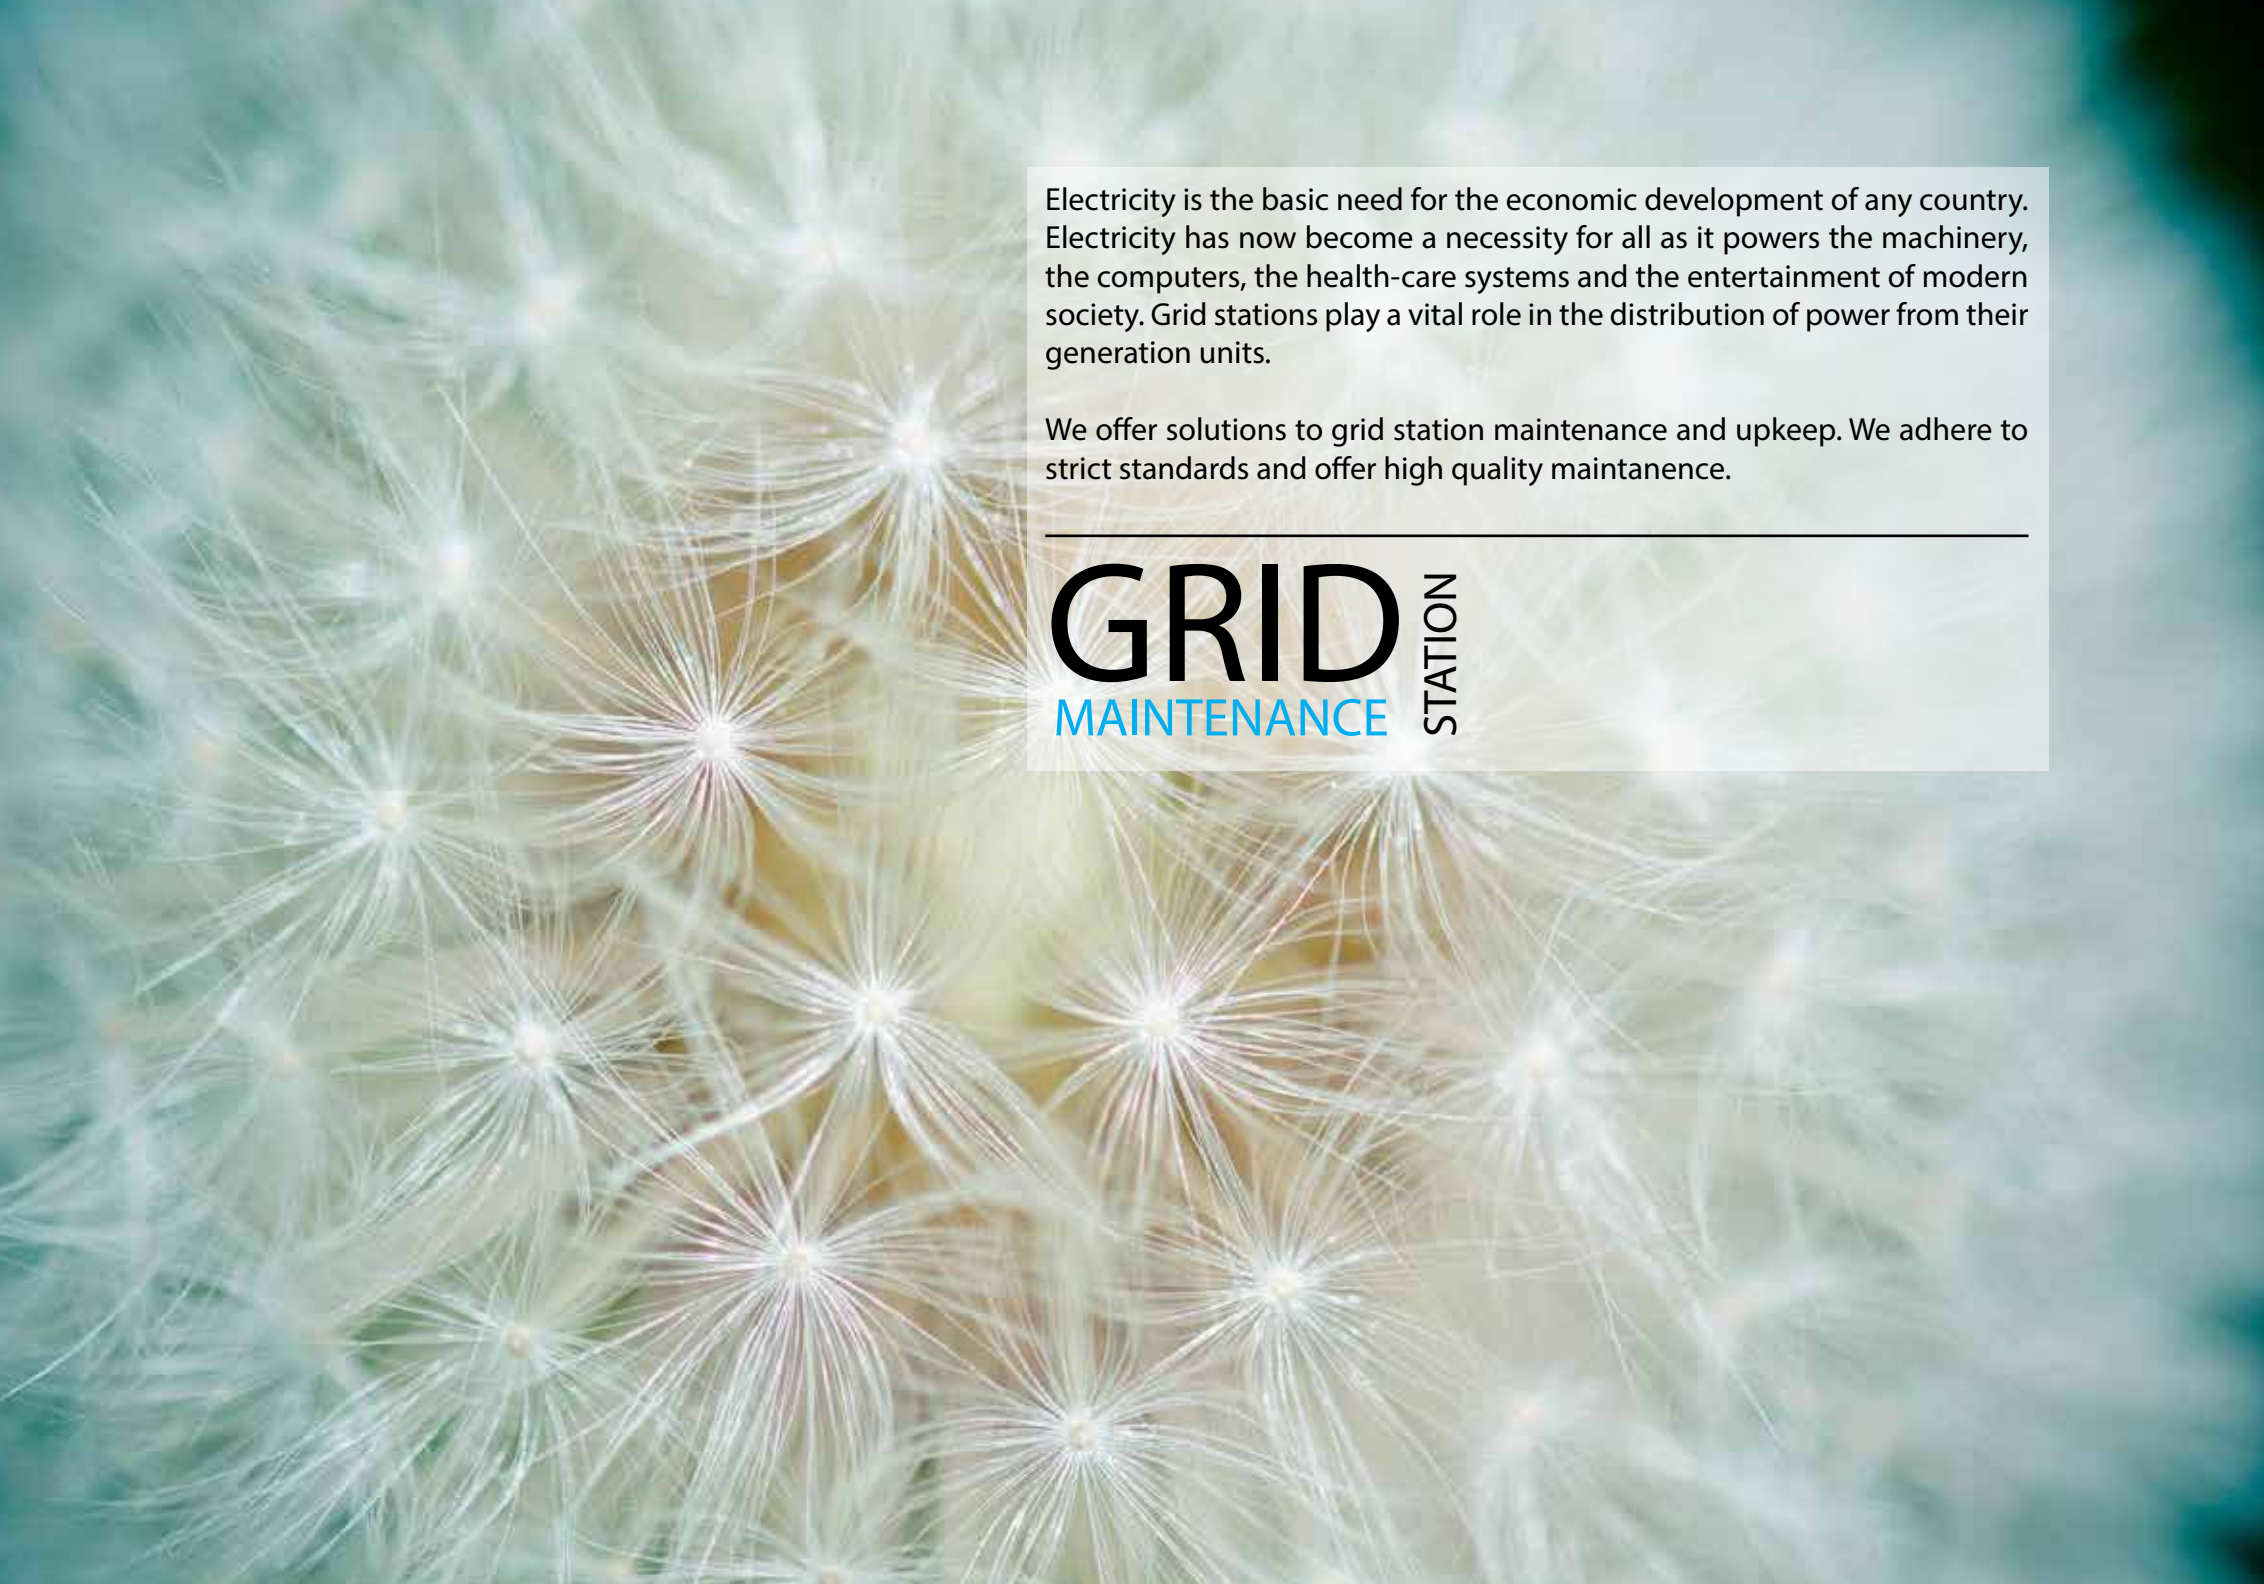

Synergy Cables manufactures cables through a continuous process including pulling of the Al or Cu wire, stranding, insulated coating (XLPE, EPR, or PVC), screening, and sheathing. Synergy Cables assures each customer a tailor-made solution to its needs, combined with logistical expertise.

Synergy Cables sells its cables worldwide and has subsidiaries in the United States, Germany and the United Kingdom. The cables are designed and manufactured according to the most demanding specifications and international standards (UL, IEC, BS, VDE, AS, IS, etc.). The company is ISO 9001:2000 certified. Our manufacturing facilities continuously incorporate the latest state-of-the-art equipment, technologies and management techniques. Rigorous vendor selection plus testing and monitoring, starting from raw materials through all stages of cable production, ensure quality excellence and years of trouble-free service.

Electricity is the basic need for the economic development of any country. Electricity has now become a necessity for all as it powers the machinery, the computers, the health-care systems and the entertainment of modern society. Grid stations play a vital role in the distribution of power from their generation units.

We offer solutions to grid station maintenance and upkeep. We adhere to strict standards and offer high quality maintenance.

GRID STATION
MAINTENANCE

INSULATIONS ELECTRICAL SYSTEM & AUTOMATIONS

We are the leading and latest innovative technology providers in the field of Electrical Systems, Insulations and Automation. We take pride in having executed jobs meeting quality, time and cost. Meeting growing needs in the energy sector, we are engaged in executing turnkey projects for industrial electrical projects. We are customer-centric in our approach, and the single largest source for a wide variety of electrical equipment and products.

With a capable team possessing strong engineering skills and experience, a strong technology orientation, we are fast emerging as a first choice for turnkey contracts for high-quality electrical projects with several industrial projects.

FIRE FIGHTING EQUIPMENT INSTALLATION

SAFETY

We give prime importance to deliver complete and integrated fire safety, prevention, detection, fire suppression, and security solutions to maximize customer satisfaction along with prompt and professional service. A team of qualified and dedicated professionals is delegated at our company which is equipped to execute the most challenging project with utmost ease to take care of all your Fire Fighting safety concerns. Our team of qualified and highly experienced engineers and technicians prudently train in Quality Assurance and Quality Control on continual basis at all levels. All our products and services follow stringent guidelines and are completed according to quality statutory and regulatory requirements.

SECURITY & SURVEILLANCE SYSTEMS

In the changing era of today, there is a dire need for companies to keep a shrewd eye on their security and surveillance systems. At our Company we provide you with a variety of technological security solutions for the residential, commercial and government sectors. Staffed with highly trained, experienced and creative individuals with sound technical background to deliver you the best as you require. Our commitment is to offer advanced CCTV System equipped with the finest quality equipment to meet today's stringent requirements. Our latest imported surveillance products meet the existing and future requirements particularly in the wake of the prevailing law and order situation globally.

PLUMBING & SANITARY CONTRACTING

We provide a well-qualified team of plumbers and plumbing technicians who are competent at handling problems and emergency plumbing situations. As a premier plumbing and sanitary contractor we provide comprehensive and cost-effective solutions guaranteed to exceed your expectations and take care of all your plumbing and sanitary needs. Installation services and repairing of a wide variety of plumbing fixtures for complete commercial projects and kitchens, bathrooms and throughout your home or office are offered at by us. We aim to provide professional efficient installation and maintenance solutions, customized to suit each and every one of our customer's requirement. Our highly dedicated, trained and experienced staff can solve your issues in an efficient and effective manner.

MAJOR WORK POWER SOLUTION

Power Solution is a total Automation and Electrical system integrator with global reach. Its scope of work can start with assisting you in the successful implementation of the project.

PANEL WORK

MAJOR WORK POWER SOLUTION

PANEL WORK

Our approach is to create strategic long – term industry partnerships with our clients. To achieve this, we combine the best industry expertise with a proven service delivery method.

MAJOR WORK POWER SOLUTION

Cable Ladder Trays are designed to meet most requirements of cable and electrical wire installations and comply to local and international standards of fabrication and finishing.

CABLE LADDER & MESH

MAJOR WORK POWER SOLUTION

Cable Mesh connection profile for installations requiring long runs of straight Cable Trays lengths. Applications : Network cabling, wiring closets, fiberto-desktop applications and can often be used in suspended ceiling plenum areas and under computer room flooring.

CABLE LADDER & MESH

MAJOR WORK POWER SOLUTION

Power Solutions Static Power offers complete battery installation services for all major brands. . Our expert technicians will work with your staff to ensure a seamless integration of the proper UPS based on site requirements, project scope and the product.

BATTERIES

MAJOR WORK POWER SOLUTION

Power Solution offer HFO generators with the most renowned brands in the world and is reputed for its economical fuel consumption. We design, install and operate HFO power plants on long-term. We provide consultancy in determining the actual requirement and assist in constructing the power house for installation of the equipment.
